KAMI - G. Suite APP

KAMI is an online document annotation and markup tool. You can highlight, underline, and strikethrough text in PDF and other document formats. There are annotation tools in Canvas to use (require some special steps for teacher and students). This tool would show up under external tool in submissions when making your assignment. They offer a minimal free package and a subscription for more tools (yearly fee). It will also need to be linked to your canvas in your course settings.

SUGGESTIONS FROM FACEBOOK GROUP ON HOW TO IMPLEMENT:

- create one on google slides, make it an assignment where the submission is a “web url”. The kids would make a copy of your google slide, make it a “shareable link” and submit it day one. Then they could work in it on their devices, perhaps with you projecting your master copy. Then when you’re done with the week/unit? You can look at them. Because it’s a url submission, you’ll see how they change. If you choose to add slides as you go (depending on grade level) you can have them copy your slides and paste them into their google slide.
- You can definitely make your assignment to submit as an “external tool” and choose your google slide from the “google docs” option. That will make their own copy. The difference is that kids submit the assignment and it turns into a pdf for you to view. In order to see their updates, they just resubmit.
